

THE NEW APP for the busy Physicians.

- Easy to use*
- Quick access everywhere*
- Hassle Free Billing Solution*
- Works with ios and android devices*

Advanced encryption

HIPPA compliant

Faster communication

The app is designed for smooth communication between the busy rounding physician and the biller in real time with the help of internet or cellular networks. The app uses the latest ICD 10 codes and Current Procedural Terminology (CPT®) codes (trademark AMA) which allows the busy physician to round faster and saves unnecessary time writing down patient information and billing codes in a piece of paper. The billing information is transferred effortlessly at the click of a button.

Principles & Advantages:

- The app uses advanced encryption for protection of billing data and is HIPPA compliant.
- Faster communication between the physician and biller without losing the integrity of the data; that is, no more illegible handwritten billing data.
- Effortless transmission to biller using internet or cellular network.
- Eliminates errors of using wrong ICD 10 codes or CPT® codes which leads to delay in submission and reimbursement.
- It eliminates the risk of losing paper billing data which can cause compromise of patient data and also loss of revenue.
- Improved revenue for the practice by preventing delay in submission of the billing.
- It helps rounding easier in a big physician group with a large volume of in-patient practice or multi-hospital practice. As the physician rounds and enters the billing in the mobile device, other physicians can realize that the patient has been seen.
- It also helps physician review the billing data by CPT® codes and analyze their productivity for the month or the year*.
- It has optional comment box for sending information to biller about setting up clinic follow up.
